

WHAT IS CLAIMED IS:

1. A lens protector that covers a lens aperture of a cabinet on an open and close basis, wherein the lens protector has a lens-protecting barrier consisting of two barrier blades, which are rotatably mounted around one shaft to cover the lens aperture on a sharing basis, and are superposed upon each other when saved from the lens aperture.

2. A lens protector according to claim 1, wherein the cabinet has a revolving guide that guides a revolution of one of the two barrier blades.

3. A lens protector according to claim 2, wherein said one barrier blade has a revolving guide that guides a revolution of another barrier blade.

4. A lens protector according to claim 1, wherein the two barrier blades consist of a half moon shaped barrier blade that covers a part of the lens aperture and another barrier blade of a wane portion.

5. A lens protector according to claim 1, wherein the lens protector further has a driving device that causes the two barrier blades to revolve around the shaft.
